increasing the survival of neuronal, dopaminergic and GABA-nergic cells - by using a ptc therapeutic such as a protein kinase inhibitor, or an agent derived from hedgehog polypeptides, useful in the treatment of parkinson's disease

Disclosure; Page 95-97; 138pp; English.

This nucleotide sequence comprises a coding region for the human comprises and protective agents in the treatment and prophylaxis of neurodegenerative disorders constituting from the loss of dopaminergic and/or GABA-nergic neurons, cor the general loss of tissue from the substantia nigra.

Exemplary disorders include Parkinson's disease, Huntington's disease (both claimed), amyotrophic lateral sclerosis and cerebral ischaemia. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene therapy constructs e.g. constructs encoding recombinant hedgehog polypeptides and trans-activation
                                                                                                                                                                                                                                                                                                                                                                         04 FEB-1999.

A bloactive polypeptide comprising amino acid residues 28-202 of human Ihh is preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can also be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           241

Disclosure; Page 104-106; 130pp; English.
CC Indian hedgehog protein ihh (see Y05516). The invention relates to
CC Indian hedgehog protein ihh (see Y05516). The invention relates to
CC tissue by ecotopically contacting muscle cells, especially muscle
CC tissue by ecotopically contacting muscle cells, especially muscle
CC tissue by ecotopically contacting muscle cells, especially muscle
CC therapeutic (i.e. hedgehog proteins and gene therapy
CC constructs) or ptc therapeutic (i.e. a small organic molecule that
CC minics the effect of hedgehog proteins on patched signalling, or
CC constructs or potentiates patched signalling) in an amount effective
CC to alter the growth state of the treated cells. Also claimed is a
CC method for treatment or prevention of disorders of, or surgical or
CC commetic repair of, such muscle tissues, by administering a
CC muscle atrophy, in particular skeletal muscle atrophy or cardiac
CC muscle atrophy, cachexia, or muscular myopathy (all claimed). The
CC meyblastic-derived tissue to provide treatment of hyperblastic or
CC meyblastic growth of muscle tissue such as in myoblastic sarcoma
CC (also claimed). The hedgehog therapeutic preferably comprises at
CC (also claimed). The hedgehog therapeutic preferably comprises at
CC (also claimed) a human hedgehog gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PT increasing the survival of neuronal, dopaminergic and GABA-nergic recells - by using a ptc therapeutic such as a protein kinase inhibitor, or an agent derived from hedgehog polypeptides, useful in the treatment of Parkinson's disease

PS Disclosure; Page 87-89; 138pp; English.

This nucleotide sequence includes a coding region for the mouse in the treatment and grophylaxis of neurodegenerative disorders resulting from the loss of dopaminergic and/or GABA-nergic neurons, or the general loss of tissue from the substantia nigra.

CC in the general loss of tissue from the substantia nigra.

CC disease (both claimed), amyotrophic lateral sclerosis and cerebral schease (both claimed), amyotrophic lateral sclerosis and cerebral schease (both claimed), amyotrophic lateral sclerosis and cerebral constructs for altering hedgehog gene regulatory sequences) and ptc therapeutics (i.e. agents which minic the effect of naturally concurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. Human Inh and Dhh cocurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. Human Inh and Dhh cocurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. Human Inh and Dhh cocurring hedgehog proteins on patched signalling) that are animal. They can also be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the provention and/or treatment of hypoxia, e.g. as a neuroperotective conditions and/or treatment of hypoxia, e.g. as a neuroperotective

Disclosure; Page 96-98; 130pp; English.
CC This nucleotide sequence comprises a coding region for the mouse
CC Indian hedgehog protein Inh (see Y05512). The invention relates to
CC tambian hedgehog protein Inh (see Y05512). The invention relates to
CC tissue by ecotopically contacting muscle cells, especially muscle
CC tissue by ecotopically contacting muscle cells, especially muscle
CC tissue by ecotopically contacting muscle cells, especially muscle
CC therapeutic (i.e. hedgehog populations and gene therapy
CC constructs) or ptc therapeutic (i.e. a small organic molecule that
CC minics the effect of hedgehog proteins on patched signalling, or
CC activates or potentiates patched signalling) in an amount effective
CC to alter the growth state of the treated cells. Also claimed is a
CC method for treatment or prevention of disorders of, or surgical or
CC commetic repair of, such muscle tissues, by administering a
CC muscle atrophy, in particular skeletal muscle atrophy or cardiac
CC muscle atrophy, cachexia, or muscular myopathy (all claimed). The
CC myoblastic growth of muscle tissue to provide treatment of hyperblastic or
CC method polypeptide or ptc therapeutic can inhibit growth of
CC myoblastic derived tissue to provide treatment of hyperblastic or
CC method for muscle tissue such as in myoblastic sarcoma
CC (also claimed). The hedgehog therapeutic preferably comprises at
CC (clastic abloactive extracellular portion of a hedgehog protein (see
CC 905510-19) encoded by a vertebrate hedgehog gene (see X25098-107),
CC especially a human hedgehog gene.

Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the encoded protein may be used as therapeutic or research reagents.

                                                                 The sequence encodes a mouse Indian hedgehog protein, homologous to a prosophila hedgehog protein (R7737), and has been isolated by low stringency screening of a mouse genome DNA library and screening of an 8.5 day post coitum cDNA library. The partial cDNA is complete at the 3'-end, as evidenced by the presence of a polyadenylation consensus sequence and short poly-A tail. Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the encoded protein may be used as therapeutic or research reagents.

A clone resulting from the amplification (encoding R77348) is used to isolate the full-length cDNA from a stage 22/22 limb bud cDNA library. Primer Q91649 is derived from the cDNA sequence, and is used to screen transgenic mice. Probes and primers derived from the sonic hedgehog sequence may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the encoded protein may be used as therapeutic or research reactors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 95-255060/33.

DR Method for limiting damage to neurons caused by ischaemic or epoxic productions - is used for the treatment and prevention of e.g. conditions - is used for the treatment and prevention of e.g. Productions - is used for the transient ischaemic attacks proceed at infarction, stroke and transient ischaemic attacks proceed at the provide and transient ischaemic attacks.

CC bischaemic or epoxic conditions by administering a ptc (patched) concurrent cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a heterologous transcription regulator linked to the coding region of this construct which recombines with the genomic hedgehog gene to provide a construct of the ptc therapeutic agent is used to protect corbital tissues against ischaemic linjury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic conditions may also be used as a prophylactic in many qther cases of conditions may cause cerebral hypoxia, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. Creatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The treatment reduces CIV by at least 25, particularly at least 70,8. The company is a hedgehog sequence given in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

Increasing the survival of neuronal, dopaminergic and GABA-nergic cells - by using a ptc therapeutic such as a protein kinase rinhibitor, or an agent derived from hedgehog polypeptides, useful in the treatment of Parkinson's disease bisclosure; Page 83-85; 138pp; English.

This nucleotide sequence comprises a coding region for the chicken Sch Sonic hedgehog protein (see W97765). The invention is based on the finding that hedgehog proteins are useful as protective agents in the treatment and prophylaxis of neurodegenerative disorders cresulting from the loss of dopaminergic and/or GABA-nergic neurons, or the general loss of tissue from the substantia nigra.

Exemplary disorders include Parkinson's disease, Huntington's disease (both claimed), amyotrophic lateral sclerosis and cerebral ischaemia. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene therapy constructs e.g. constructs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chicken Sonic hedgehog (Shh) cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        occurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. Human Ihh and Dhh polypeptides (see W97063-64) are preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can also be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        constructs for altering hedgehog gene regulatory sequences) and ptc therapeutics (i.e. agents which mimic the effect of natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encoding recombinant hedgehog polypeptides and trans-activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

PT Increasing the survival of neuronal, dopaminergic and GABA-nergic process by using a ptc therapeutic such as a protein kinase with into the treatment of parkinson's disease

PT inhibitor, or an agent derived from hedgehog polypeptides, useful in process the treatment of Parkinson's disease

PS Disclosure; page 97-99; 138pp; English.

CC This nucleotide sequence comprises a coding region for the human combined that hedgehog protein (see W97764). The invention is based on the treatment and prophylaxis of neurodegenerative disorders combined that hedgehog protein sare useful as protective agents continued that hedgehog protein sare useful as protective agents continued that hedgehog protein sare useful as protective agents continued that hedgehog protein sare useful as protective agents continued that hedgehog proteins are useful as protective agents continued that hedgehog proteins are useful as protective agents continued that hedgehog continued the substantian nigra.

CC in the general loss of tissue from the substantian nigra.

CC disease (both claimed), amyotrophic lateral sclerosis and cerebral continued to the protects of central sclerosis and cerebral ischaese (both claimed), amyotrophic lateral sclerosis and cerebral continued protects and gene therapy constructs e.g. constructs constructs for altering hedgehog polypeptides and trans-activation concurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. A bloactive protective and both human and animal subjects. A bloactive conditions arising from the use conficient of treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, conficultive agent.
                                                                                                                                                                                   Query Match

PS Disclosure; Page 106-108; 130pp; English.
PS This nucleotide sequence comprises a coding region for the human CC Desert hedgehog protein Dhh (see Y05517). The invention relates to CC a method for modulating the formation and/or maintenance of muscle CC tissue by ecotopically contacting muscle cells, especially muscle CC stem/progenitor cells, in vitro or in vivo, with a hedgehog CC therapeutic (i.e. hedgehog proteins on patched signalling, or CC constructs) or ptc therapeutic (i.e. a small organic molecule that CC mimics the effect of hedgehog proteins on patched signalling, or CC activates or potentiates patched signalling) in an amount effective CC to alter the growth state of the treated cells. Also claimed is a CC method for treatment or prevention of disorders of, or surgical or CC consettic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be compared atrophy, in particular skeletal muscle atrophy or cardiac CC muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of moscle tissue such as in myobiastic sarcoma CC (also claimed). The hedgehog therapeutic preferably comprises at CC (also claimed). The hedgehog therapeutic preferably comprises at CC (also claimed). The hedgehog therapeutic preferably comprises at CC (also claimed) a vertebrate hedgehog gene (see X25098-107), CC especially a human hedgehog gene.
